

Sharath Chandra Reddy Dumpali

Software Engineer - Java Full Stack Developer

Sharathreddyd116@gmail.com | (860) 540-6066 | USA | <https://www.linkedin.com/in/sharathdumpali-softwareengineer/>

PROFESSIONAL SUMMARY

Innovative Senior Software Engineer (Java Full Stack) with 4+ years building and scaling enterprise systems for finance, e-commerce, retail, healthcare, and technology domains. Deep hands-on with **Java (8/11/17), Spring Boot/Cloud/Security, React.js, Angular, AWS (EC2, Lambda, RDS, ECS, API Gateway, CloudWatch), Docker, Kubernetes, and CI/CD** (Jenkins, GitHub Actions). Designed **microservices, event-driven** and **cloud-native** platforms; built secure **REST/GraphQL APIs** with **OAuth2/JWT**; optimized **PostgreSQL, MongoDB, Redis, Elasticsearch**; messaging with **Kafka/RabbitMQ**; quality with **JUnit/Mockito/Jest/Selenium**; observability via **ELK/Splunk/Prometheus/Grafana**. Delivered platforms serving **2M+ daily users** with **99.99% uptime**, cut latency **85%**, increased scalability **300%**, drove **\$5M+ revenue impact** and **40% cost savings**. Implemented **zero-downtime releases** and reduced deployment failures **85%** through automated pipelines; mentor engineers and lead agile delivery to ship secure, high-performance software at scale.

EDUCATION

Master's Degree in Computer Science | University of New Haven, CT, USA

Bachelor's Degree in Computer Science | Sathyabama Institute of Science and Technology, TN, India

TECHNICAL SKILLS

- **Programming Languages:** Java (8/11/17), JavaScript, TypeScript, Python, SQL, HTML5, CSS3, Shell Scripting
- **Backend Technologies:** Spring Boot, Spring MVC, Spring Security, Spring Cloud, Spring Data JPA, Hibernate, RESTful APIs, GraphQL, Microservices
- **Frontend Technologies:** React.js, Angular 12+, TypeScript, JavaScript ES6+, HTML5, CSS3, Redux, Material-UI, Bootstrap, D3.js
- **Cloud Platforms:** AWS (EC2, S3, Lambda, RDS, ECS, CloudWatch, API Gateway), Microsoft Azure, Google Cloud Platform (GCP)
- **Databases:** PostgreSQL, MySQL, Oracle, MongoDB, Redis, Elasticsearch, Database Design, Query Optimization
- **DevOps & CI/CD:** Docker, Kubernetes, OpenShift, Jenkins, GitLab CI, GitHub Actions, Maven, Gradle, Terraform
- **Application Architecture:** Microservices, RESTful APIs, SOAP, Event-Driven Architecture, Domain-Driven Design, Distributed Systems
- **Testing Frameworks:** JUnit, TestNG, Mockito, Jest, Selenium WebDriver, Postman, SonarQube, Integration Testing
- **Monitoring & Logging:** Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, New Relic, CloudWatch
- **Message Queues & Streaming:** Apache Kafka, RabbitMQ, Amazon SQS, Redis Pub/Sub, Event Streaming
- **Version Control & Collaboration:** Git, GitHub, GitLab, Bitbucket, JIRA, Confluence, Slack
- **Methodologies & Practices:** Agile, Scrum, SAsE, TDD, BDD, Code Review, Pair Programming, Clean Code Principles

PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER - FULL STACK DEVELOPER | BNY MELLON, CONNECTICUT, USA | SEPT 2024 – PRESENT

Description: BNY Mellon is a global investments company and one of the world's leading asset management and asset servicing organizations, serving institutional clients, corporations, and high-net-worth individuals across 35+ countries. I am responsible for developing enterprise-scale investment portfolio management platforms and risk analytics solutions that support critical financial operations.

- **Investment Portfolio Management Platform** – Architected and developed real-time portfolio management system using Java, Spring Boot, React.js, AWS, and PostgreSQL, processing \$2B+ daily transactions with sub-second latency while serving 10,000+ institutional clients, implementing distributed system architecture that achieved 99.99% availability and supported 5M+ API calls daily
- **Microservices Architecture & Cloud Solutions** – Led design and implementation of 15+ microservices using Spring Boot, Spring Cloud, Docker containerization, and AWS ECS deployment, implementing service discovery, load balancing, and circuit breaker patterns that improved system scalability, fault tolerance, and maintained high availability while supporting massive transaction volumes
- **Frontend Development & User Experience** – Built responsive React-based dashboard with real-time WebSocket updates, TypeScript integration, Material-UI components, and D3.js visualizations, creating intuitive investment management interfaces that improved user engagement by 60% and reduced customer support tickets by 40% through enhanced UX design
- **Performance Optimization & Caching** – Implemented distributed caching strategies using Redis, optimized database queries with advanced indexing, connection pooling, and query optimization techniques that reduced API response time from 800ms to 120ms (85% improvement) while maintaining data consistency and improving overall system performance

- **Risk Analytics Engine Development** – Developed high-throughput risk calculation engine using Java, Apache Kafka, MongoDB, and event-driven architecture, processing 100K+ transactions per second with real-time risk assessment capabilities, implementing complex financial algorithms and risk models that enhanced decision-making speed by 45%
- **API Development & Security** – Created comprehensive REST APIs using Spring Boot with OAuth 2.0 security implementation, JWT authentication, input validation, and error handling, achieving 100% test coverage with JUnit and Mockito while ensuring API security, scalability, and maintaining detailed Swagger documentation
- **DevOps & Automation** – Established CI/CD pipeline using Jenkins, Docker containerization, automated testing, and deployment automation that reduced release cycle from 2 weeks to 2 days while achieving zero-downtime deployments and reducing deployment failures by 85% through comprehensive automation strategies

Environment: *Java, Spring Boot, React.js, AWS, PostgreSQL, MongoDB, Docker, Jenkins, Kafka, Redis*

SOFTWARE ENGINEER - JAVA DEVELOPER | DATAONE SOLUTIONS, INDIA | JUN 2021 – JUN 2023

Description: DataOne Solutions is a technology consulting company providing custom software development and digital transformation services to enterprise clients across e-commerce, retail, healthcare, and financial services industries, specializing in modernizing legacy systems and building scalable cloud-native applications.

- **E-Commerce Platform Modernization** – Spearheaded migration of legacy monolithic application to microservices architecture using Java, Spring Boot, AWS cloud services, and containerization technologies, improving system scalability by 300%, reducing infrastructure costs by 40%, and enabling independent service deployment that enhanced development team productivity and system maintainability
- **RESTful API Development & Performance** – Developed 20+ high-performance RESTful APIs using Spring Boot, Spring MVC, implementing proper HTTP methods, status codes, and error handling, handling 2M+ daily requests with average response time under 200ms while achieving 99.9% uptime SLA through robust architecture design and comprehensive monitoring
- **Asynchronous Processing & Messaging** – Implemented asynchronous processing solutions using RabbitMQ message queuing, Apache Kafka for event streaming, and Spring Boot async capabilities, reducing order processing time by 65% and enabling the system to handle 10K+ concurrent users while maintaining data consistency and system reliability
- **Customer Data Platform Development** – Designed and developed customer 360° platform using Java, Spring Boot, React.js, PostgreSQL, and Elasticsearch, integrating data from 8 different sources to provide unified customer view for 5M+ customers, implementing data synchronization, validation, and real-time updates that improved customer service efficiency
- **Frontend Development & Admin Portal** – Built comprehensive React-based admin portal with TypeScript, role-based access control (RBAC), responsive design, and modern UI components, implementing authentication, authorization, and user management features that reduced manual data management effort by 80% and improved operational efficiency
- **Search & Analytics Implementation** – Implemented Elasticsearch for full-text search capabilities across 50M+ records, designed efficient indexing strategies, query optimization, and aggregation pipelines that improved search performance by 10x while supporting complex queries, filtering, and real-time analytics for business intelligence
- **Batch Processing & ETL Operations** – Created robust batch processing jobs using Spring Batch framework for ETL operations, implementing error handling, retry mechanisms, and data validation that processed 1M+ records hourly with 99.8% accuracy while maintaining data quality and supporting business reporting requirements
- **Team Leadership & Code Quality** – Mentored 2 junior developers, conducted 100+ code reviews, established coding standards and best practices, implemented automated testing strategies that achieved 90% code coverage and reduced production defects by 75% while improving team productivity by 30%

Environment: *Java, Spring Boot, React.js, PostgreSQL, MongoDB, Elasticsearch, RabbitMQ, AWS, Docker, Jenkins*
